

Hardware Enablement for SLED11

Philip Oswald

Project Manager OPS

Hardware Enablement

poswald@novell.com

01 October 2008

Novell®

Background

- In general we are pulling from the 2.6.27 kernel.
- Hardware that is supported in the 2.6.27 kernel is generally supported in SLED 11.
- Some back ports coming from 2.6.28 such as the FCoE stack (Server for the most part).
- There is a policy for SLE11 to only include packages that are L3 (Engineering Level) supportable. This means if it is not upstream than typically it is not considered L3 supportable.
 - Current Atheros (Proprietary) package found in SLED10 is being removed for SLED11.

Graphics

- New Intel Graphics support
- Added Matrox support for G200
- Will continue to update the ATI and Nvidia Repositories
 - ATI Catalyst 8.9 support
 - The ATI repo will now have a fglrxG02 package
- VIA and SiS coming with Open Source drivers post SLED11 possibly available through the PLDP
 - PLDP (Partner Linux Driver Process)

WLAN support

- All of Intel wireless hardware should be supported
 - Behind on the 5xxx drivers
- Atheros is supporting the ath9k however not all of their desired changes have made it to the project. A possible PLDP candidate
 - We will include the ath9k driver in SLED 11
- Broadcom concerned their interpretation of FCC restrictions so the Broadcom sanctioned driver will not be in SLED 11.
 - Available from the PLDP on a Broadcom website
 - Moving to GPL with exception of the FCC portion

LAN support

- Broadcom Drivers
 - tg3, bnx2, bnx2x
- Intel Drivers
 - igb, ixgbe, e1000, e1000e
- Realtek
 - 8111CP/8111DP
- List your favorite driver that is upstream ...
 - In most cases the upstream 2.6.27 drivers will be included

Storage Drivers

- Same as LAN, If upstream it should end up in our distribution.
- New Fibre Channel Companies showing up.
 - Brocade
 - Cisco
- SATA support for the new Intel systems

New or enhanced support

- Support “Smart Battery”
- IDE Hotplug for Laptops
- Support for Smartcards
- Docking support for notebooks
- Support PC Card housed smart card readers
- ICH10 SATA, USB, HD Audio and 12C(SMBUS)
- PCI Express ASPM support
- Support for 92HD71B7 IDT audio codec
- ALSA driver for ICH10
- PulseAudio (Implementing)

New or enhanced support continued

- Support for S3 and S4 Power States
- Suspend to ram (sleep)
- Suspend to disk (hibernate)
- Full suspend/resume for HP workstations

Tainted Flags with Kernel Modules

GPL/NON-GPL!, UNSUPPORTED!

Closed-source Module delivered by 3rd-Party Vendor.
Not built in Alignment with Linux Driver Process.
High risk to the customer. Not supportable by Linux Distributor.

NON-GPL!, Externally Supported!

Closed-source Module delivered by 3rd-Party Vendor.
In Alignment with Linux Driver Process, packaged as KMP.
Very restricted Support by Linux Distributor, no Support by Community. Testcase/Patch required from Driver Vendor.
No reverse Engineering by Novell.

GPL, Externally Supported!

Open-source Module delivered by 3rd-Party Vendor.
In Alignment with Linux Driver Process, packaged as KMP.
Limited Support by Linux Distributor and Community,
Testcase/Patch required from Driver Vendor.

GPL, Supported!

Open-source Module delivered by Novell. Accepted Upstream,
packaged as KMP.
Regular Support by Linux Distributor and Community!

Novell Partner Linux Driver Process

Partner Linux Driver Process (PLDP)

- Enable new Hardware Support
- Enable Kernel Modules not included in Distro
 - Upstream and GPL
 - Not upstream but GPL
 - Open Source but non-GPL
 - Proprietary
- Establish L3 Support Channels
- kABI Notifications

Partner Linux Driver Process - cont'd

- Consistent KMP Creation
 - Spec-File Template
 - Linux Foundation, Driver Backport Project (In Development)
- KMP Distribution
 - Novell controlled Repositories (GPL only)
 - Partner controlled Repositories
 - Driver Kit Creation
- Upstream Guidance
